

## Steel Secure Seam on Plywood

### Product Description

Clipped snaplock panel with nominal 1.75" tall rib and 18"  
(max) coverage

### Product Material

**24ga (min) steel**

Corrosion resistant per FBC 1507.4.3 where required.

### Fastener

**#10 low profile fastener, (2) per clip**  
**18ga 3.5" long clip**

Fasteners compliant with FBC 1506.6 where required.

### Substrate/Deck

**Wood Purlins (min 1x4) on 15/32" plywood (min) or 3/4"**  
**wood plank (min S.G. 0.42)**  
Min. 1x4 No. 2 SYP wood purlins

**Maximum Allowable Loads & Installation Requirements:**

This product approval covers 1 installation configuration. A factor of safety of 2 has been applied to all allowable uplift pressures shown.

**24ga (min) panel on 15/32" (min) Plywood, or 3/4" wood plank (S.G. min 0.42)**

**1x4 attachment: 8Dx2 1/2" (min) ring shank nails in staggered rows at 3" O.C.**

**Method A: (2) #10 fasteners per clip and clips at 24" o.c.: 75.95 PSF**

**Method B: (2) #10 fasteners per clip and clips at 12" o.c.: 101 PSF**

Interpolation between clip spacing for Method A and Method B is permitted.

METHOD A: 24" O.C.  
METHOD B: 12" O.C.

**Underlayment:** Comply with local building code or FBC 1507.1.1/1518.2 where required.

**Slope:** Comply with local building code or FBC 1507.4.2/FBC 1515.2 where required.

**Re-Roofing:** This panel may be installed over a single layer of existing shingles as permitted by local building code or FBC 1511/1521, provided the existing roof meets the conditions required by the applicable code.

**Fire Barrier:** Comply with FBC 1516.1 and 1516.2 where required.

**Plywood Thickness:** Minimum 15/32" plywood. Comply with FBC 2322.2.3 where applicable.

**Technical Documentation:**

This product has been tested by Force Engineering (TST5328) to the UL580 standard, test number 101-0242T-17C & D as referenced in FL 24508.1-R4.

This product has been tested by Farabaugh Engineering and Testing (TST1654) to the TAS 125 /UL580 standard, test number T306-22 as referenced in FL 41930.01-R0

This product has been tested by Farabaugh Engineering and Testing (TST1654) to the TAS 100 standard, test number T330-22 as referenced in FL 41930.01-R0

**Compliance Statement:**

This product as described has demonstrated compliance with Florida Building Code 2023, 1504.3.2 (**non-HVHZ**) and 1518.9.1/1523.6.5.2.4 (**HVHZ**), as required by FL Rule 61G20-3, method 1D.

This product as described has been tested and demonstrated compliance with:

- TAS 125: Standard Requirements for Metal Roofing Systems
- TAS 100 - Wind and Wind-Driven Rain
- UL 580 – Test for Uplift Resistance of Roof Assemblies
- UL 1897 – Uplift test for roof covering systems

**Design Process:**

Compare the maximum allowable loads on page 2 to the ASD uplift pressures for the project to determine sufficiency and installation requirements.

Alternatively, as an option, the load tables in this report provides one prescriptive option for the fastening requirement for the applicable wind loads for roofs within the parameters described. For roofs outside of the listed parameters, design wind loads shall be determined as required by FBC 1609, ASCE 7, or other design code in force, using allowable stress. These load tables are based on ASCE 7-22. Use of these tables assumes that the structure is: Enclosed and conforms to wind-borne debris provisions and is a regular shaped building and is not subject to across-wind loading, vortex shedding, or instability; nor does it have a site location for which channeling or buffeting warrant consideration

Engineering analysis may be completed by other licensed engineers for project specific approval by local authorities having jurisdiction.

**Optional Load Tables:**

These load tables are provided as a courtesy to provide one possible prescriptive option for a generic, typical structure without calculating the design pressures.

For structures outside the parameters of these load tables (e.g. height above 30 feet), calculate the required allowable design pressure and compare to the maximum allowable loads shown on page 2. These load tables shall not be construed to in any way limit the installation of this product to the cases shown.

Contact the manufacturer for further information, or consult a licensed design professional.

**Instructions:**

Select the appropriate load table that applies to the structure in question.

Determine the design wind speed for the project location.

Use the attachment method indicated for that windspeed within each roof zone.

Use this load table for structures which meet the following criteria:

- Are located in **Exposure B** area
- Have either a **flat roof, or gable/hip roof with max slope of 45° (±12:12)**
- Have a mean roof height of **30 feet or less**

### Exclusions and Limitations:

Design of deck and roof structure (to include attachment of plywood or wood plank) shall be completed by others. Fire classification and shear diaphragm design are outside the scope of this evaluation. Accelerated weathering/salt spray is outside the scope of this evaluation.

This report is limited to compliance with structural wind load requirements of FBC 1504.3.2, as required by Rule 61G20-3. Neither Timberlake Cove nor the manufacturer shall be responsible for any conclusions, interpretations, or designs made by others based on this evaluation report. This report is limited solely to documenting compliance with Rule 61G20-3, and makes no express or implied warranty regarding performance of this product. Installation shall be subject to the local building code and authority having jurisdiction; this report shall not be construed to supersede local codes in force.
