

**FLORIDA BUILDING COMMISSION**  
**2010 FLORIDA ENERGY CODE WORKGROUP**  
**October 14, 2009—Meeting VII**  
**Embassy Suites Hotel**  
**3705 Spectrum Boulevard—Tampa, Florida 33612—1.813.977.7066**

*Meeting Objectives*

- ✓ To Approve Regular Procedural Topics (Agenda and Summary Report)
- ✓ To Hear Presentation on IECC Requirements, DOE Proposals and Future Efficiency Increases
- ✓ To Hear Presentation on IECC Residential Compliance Method Modification to Allow Efficiency Tradeoffs and Maintenance of Equivalent Standards Between Compliance Methods
- ✓ To Hear Presentation on Analysis of Commercial Building Energy Efficiency Standard Increases
- ✓ To Evaluate Issues and Options Regarding Strategic Plan
- ✓ To Adopt Strategic Plan for Submittal to the Commission
- ✓ To Identify Issues and Options Regarding Project Tasks and Sub-Tasks
- ✓ To Discuss and Evaluate Level of Acceptability of Proposed Options
- ✓ To Consider Public Comment
- ✓ To Identify Needed Next Steps and Agenda Items for Next Meeting

*All Agenda Times—including Public Comment and Adjournment—are Subject to Change*

*Meeting Agenda*

- 8:30 Welcome and Opening**
- Agenda Review and Approval**
- Approval of September 3, 2009 Facilitator's Summary Report**
- Presentation on IECC Requirements, DOE Proposals for 2012 IECC, and Plan for Future IECC Efficiency Standard Increases**
- Presentation on IECC Residential Energy Budget Compliance Method Modification to Allow Efficiency Tradeoffs for all Building Components and Maintenance of Equivalent Energy Efficiency Standard Between Compliance Methods**
- Presentation on Analysis of Commercial Building Energy Efficiency Standard Increases**
- Develop Strategic Plan for Energy Standards Revision (Task 46, Pursuant to 553.9061 F.S.)**
- Review the compliance methods characteristics chart developed at the May 2009 meeting.
  - Exercise to rank each compliance method according to the criteria established for the strategic plan and selection of the methods appropriate to meeting the objective of the plans.
- Adoption of Strategic Plan for Submittal to Energy TAC and Commission**

**Discussion, Identification and Evaluation in Turn of Issues and Options Regarding Project Tasks and Sub-Tasks**—AC equipment replacement; Humidity and moisture control problems; Specific building options to achieve energy efficiency improvements; Energy efficient pools systems; Green roofs and cool roofs; and, 2010 FBC energy requirements.

**General Public Comment**

**Review of Workgroup Delivery and Meeting Schedule**

**Next Steps: Agenda Items, Needed Information, Assignments, Date & Location**

*Adjourn*

**Contact Information and Project Webpage**

Jeff Blair: [jblair@fsu.edu](mailto:jblair@fsu.edu) ; <http://consensus.fsu.edu/FBC/2010-Florida-Energy-Code.html>

**2010 Florida Energy Code Workgroup**

Steve Bassett, Rusty Carroll, Bob Cochell, Phillip Fairey, Dale Greiner, Jeff Gross, Jeff Householder, Bill Kent, Tom Larson, Larry Maxwell, Donny Pittman, Paul Savage, Drew Smith, Jeff Stone, and Rob Vickers.

**Meeting Dates**

February 3, 2009: Melbourne, March 5, 2009: Cape Canaveral, March 27, 2009: Tampa, April 30, 2009: Tallahassee, May 28, 2009: Tallahassee, September 3, 2009: Gainesville, October 14, 2009: Tampa; November 2009: TBD; December 2009: Orlando.

## OVERVIEW AND PROJECT SCOPE

Governor Crist directed the Commission to increase building energy efficiency requirements by 15% in his July 2007 Executive Order 127. In addition, the 2008 Legislature through passage of The Energy Act of 2008 created a suite of energy related assignments for the Building Commission. The Energy Code provisions were a major focus of the Commission during 2008, and the Commission increased the thermal efficiency requirements for the Florida Energy Code by 15% and integrated the enhanced requirements into the 2007 Florida Building Code. The Commission reviewed energy related code amendments adopted in the 2007 Florida Building Code Update to determine their cumulative level of increased efficiency, and adopted additional amendments required to achieve Governor Crist's directive of 15% increased efficiency. During 2008 the Energy Code was amended by administrative rule and then the revised Energy Code was adopted into the 2007 Florida Building Code during the 2008 "glitch" cycle concurrently with the March 1, 2009 effective date for the 2007 Florida Building Code. Working with stakeholders using consensus-building workgroups, the Commission was able to achieve the 15% increase in efficiency in buildings and implement code amendments that are efficient, consistent, understandable and enforceable for the full spectrum of Energy Code users. The Commission's Energy Code Workgroup will develop recommendations regarding energy conservation measures for increasing efficiency requirements in the 2010 FBC by 20% as required by law.

### **Study Energy Conservation Measures and Develop a Plan for 20% Increased Efficiency Requirement for 2010 FBC**

Section 109, HB 7153 establishes a schedule for increases in building energy efficiency requirements. This task expands the study of energy conservation measures for residential buildings to investigation of efficiency options for commercial buildings and the development of a plan to implement the requirements of the new law. Section 553.9061 "Scheduled increases in thermal efficiency standards." was created to establish percent increases in efficiency to be implemented in the 2010, 2013, 2016 and 2019 Code.

With the adoption of the Glitch Amendments to the 2007 Edition of the Florida Building Code and the revisions to Rule 9B-13 Thermal Efficiency Standards, the Commission implemented a strategy for increasing the energy efficiency provisions of the Code by 15%. The Commission's Energy Code Workgroup and Energy TAC are working with stakeholder to evaluate options for achieving an additional 5% increase for the 2010 Edition of the Code, and for achieving the progressive increases in efficiency required for subsequent editions of the code.

### **Develop Rule for Energy Code Cost Effectiveness Test**

Section 109, HB 7153 directs the Commission develop a rule for determining cost effectiveness of energy conservation measures to be considered for inclusion in the Florida Energy Code. The rule must be completed and applied to the update of the energy provisions of the for the 2010 Florida Building Code.

*"(3) The Florida Building Commission shall, prior to implementing the goals established in subsection (1), adopt by rule and implement a cost-effectiveness test for proposed increases in energy efficiency. The cost-effectiveness test shall measure cost-effectiveness and shall ensure that energy efficiency increases result in a positive net financial impact."*

The Commission will be working with stakeholders during 2009 to develop cost effectiveness test criteria to be applied to justification for increased residential building energy efficiency requirements.

The Commission will conclude rule making in time for the adopted rule to be effective prior to the 2010 Code adoption process.

### **Identify Specific Building Options to Achieve the Energy Efficiency Improvements**

**The Energy Act of 2008 (HB 7135) directs the Commission to include, as a minimum, certain technologies for achieving enhanced building efficiency targets established by the Act in the Florida Energy Code. The Building Code Act of 2008 (HB 697) directs the Commission to facilitate and promote the use of certain renewable energy technologies.**

The Commission's Energy Code Workgroup will work with stakeholders beginning in early 2009 on a comprehensive evaluation of options for achieving energy efficiency initiatives for the Florida Building Code including: mandated increases in energy efficiencies for subsequent editions of the Code, criteria for cost effectiveness test for increases in energy efficiency, studying energy conservation measures for replacement of air conditioning equipment, and investigating humidity and moisture control problems for hot and humid climates.

### **Develop Design Criteria for Energy Efficient Pool Systems**

The Energy act of 2008 (HB 7135) directs adoption of pool pump efficiencies in the 2010 Code. During discussions with the Florida Spa and Pool Association regarding energy efficiency requirements for pool pumps members suggested improved efficiency could be achieved through criteria for pool hydronic system design. This initiative would be conducted in coordination with the national industry and other state's initiatives currently underway.

### **Investigate Humidity Control Problems for Hot and Humid Climates**

At the recommendation of the Energy TAC, the Commission convened a Regional AC Efficiency Workgroup since the USDOE now has authority to develop and adopt regional AC efficiency standards. The Workgroup was charged with developing recommendations on whether the Commission and DCA should recommend to the United States Department of Energy (USDOE) regional AC efficiency standards for the hot and humid climate, and if determined a regional standard is a good strategy, then to develop recommendations for the technical requirements. The Workgroup investigated the feasibility of a hot-and-humid climate regional efficiency rating for air-conditioner and heat-pump systems, and recommended that the Commission should develop recommendations regarding AC equipments' role in controlling humidity and moisture in buildings.

Following the first meeting, the scope of the Workgroup was changed to develop recommendations regarding AC equipments' role in controlling humidity and moisture in buildings in a hot and humid climate. The Workgroup is tasked with considering a range of issues and options regarding the manufacturing, design and installation of AC equipment in controlling moisture and preventing mold and mildew in the hot and humid Florida climate.

In addition, air conditioning contractors raised the concern that building energy efficiency optimization, commodity grade air conditioning systems and mechanical systems construction practices are combining to cause indoor humidity control problems.

### **Study Energy Conservation Measures for Replacement of Air Conditioning Equipment**

This task is a recommendation of the Commission's Energy TAC resulting from consideration of Energy Code amendment proposals regarding replacement air-conditioning systems at the October 2008 meeting.

## Analysis of Code Impacts of H.R. 2454 American Energy Security Act

### Summary:

As with the AARA, the ACESA requires states to adopt and enforce energy efficiency building codes. At least two sets of funds and or allotments designated for states require certification of compliance to national building selected and updated by the US DOE.

Also, the targets for increased energy efficiency requirements for the national code established by the bill are more aggressive than those established by Florida law.

### Titles of Interest:

Title II, Subtitles A & B

Sec. 201	Building Codes
Sec. 204	Building Performance Labeling Program
Sec. 211	Lighting Efficiency Standards
Sec. 212	Other Appliance Efficiency Standards
Sec. 213	Appliance Efficiency Determinations and Procedures
Sec. 215	WaterSource
Sec. 218	Certified Stoves Program
Sec. 219	Energy Star Standards

### Energy Code Required Improvements:

- Improvement referenced to –  
Residential 2006 IECC  
Commercial 2004 ASHRAE Std 90.1
- Schedule of improvement **targets** –

Effective date of the bill	30%
2017 Res/2018 Com	50%
2020 Res/2021 Com	5% additional
2023 Res/2024 Com	5% additional
2026 Res/2027 Com	5% additional
2029 Res/2030 Com	5% additional
2033 and beyond	DOE to set target
- Building code complying with target within 1 year of the target date
- DOE can modify target lower or higher based on cost effectiveness.
- Cost effectiveness to consider externalities, e.g. climate change and peak energy demand.
- If there is a national consensus code that meets the target improvement at the 1 year from target time point then it becomes the national building code.
- DOE to support development of consensus codes and standards.
- For residential code DOE to consider:
  - ASHRAE stds
  - IECC
  - RESNET data on measures to qualify for tax credits
  - DOE Build America Program
  - Energy Star Program data
  - New Building Institute data
  - State and local standards for cool roof
- For commercial code DOE to consider:

ASHRAE codes

IECC

Core Performance Criteria of NBI

Commercial High-Performance Green Building Office of DOE data

Energy Star

RESNET data

Cool roofs of state & local codes

- If DOE selects a consensus model code it must:
  - Notify state and local entities
  - Provide distribution on internet and to state and local entities at no cost
  - Contract with an entity to provide training
  - Can give grants to the entity
  - Provide input to the model code process for how to achieve the next target
- States shall:
  - Within 1 year – certify equivalence of state code or adoption of national code to DOE (for states that adopt the energy code).
  - DOE has 90 days to accept or reject certification.
  - Within 2 years states must certify it has achieved compliance based on 90 percent and measures adopted by DOE or equivalent.

Incentives to states:

Incentive for compliance –

- For states with certifications accepted by DOE will get state allowances “pursuant to 782(g)(2) of the “Clean Air Act””
  - 1/5 of total in equal amount allotted to all states
  - 2/5 based on state energy use
  - 2/5 based on construction starts/new building permitsAmount not used due to states not in compliance will be distributed to state in compliance
- In states where locals enforce the code a minimum of 50% of the state’s allowance must go to the local governments based on population.
- DOE is provided \$100,000,000 annually for supporting this section.

Penalty for non-compliance –

- State does not get its Emission Allowances
- State does not get \$ in excess of its share of the \$125,000,000 annual allocation to DOE under sec. 323 of the bill. Penalty schedule –  
Additional (beyond base allowance) reduced by:
  - 25% year 1
  - 50% year 2
  - 75% year 3
  - 100% year 4 and later

State Emission Allowances –

2012 – 2050

Deposited into the state’s SEED account

- 1/3 Equal amounts to states
- 1/3 Prorated by population
- 1/3 Prorated by state energy use

Use of Allowances –

- (2) (A) Building Code
- (B) Energy Efficiency Manufactured Home Program
- (C) Building Energy Performance Labeling Program
- (D) Smart Grid
- (E) Transportation Planning
- (F) Low income community Energy Efficiency Programs
- (G) Other cost effective Energy Efficiency programs for end use customers
- (3). REEP – Retrofit Energy and Environmental Performance
- (4) Capital grants, tax credits, production incentive loans, loan guarantees, forgivable loans, and interest buy-down

Schedule for allowances –

- 15% for (2)
- 12.5% for pass through to local governments
- 5% for (3)
- 20% for (4)
- 47.5% for (2)(A)-(F), (3) and (4)

**ENERGY CODE TASKS FROM COMMISSION WORKPLAN**

The 2008 Legislature established several directions for development of the Florida Energy Code provisions of the 2010 Florida Building Code. The broadest direction is the requirement for 20% increase in efficiency and the other tasks fall under it. Three additional not legislated energy code related tasks are on the work plan also. All tasks must be coordinated for determination of the requirements for the 2010 Code. Consequently, they are organized under the broad task.

**Primary Task -**

**35. Study Energy Conservation Measures Code Compliance Methods and Develop a Plan for Increased Efficiency Requirements for Future FBC's (HB 697 and HB 7135)**

*Origination:* The 2008 Legislature directed the Commission to enact specific increase in building energy efficiency requirements in HB 697 (Building Code) and HB 7135 (Energy). This task initiates the study and development of a schedule of increasing requirements, the first of which are to be enacted in the 2010 FBC whose development begins in 2009.

**Sub-Tasks –**

**27. Develop Rule for Energy Code Cost Effectiveness Test (HB 687 and HB 7135)**

*Schedule for Sub-Task 27:*

Appoint Work Group	12/9/08
Work Group/TAC meetings to develop recommendation	2/3/09
	3/5/09
	3/27/09
Rule Development Workshop	4/09
Rule Adoption Hearing	6/09

Notice of Change published  
Rule Effective

7/3/09  
9/1/09

Status: Complete

% Complete

**Origination:** The Commission was directed by the 2008 Florida Legislature in HB 697 and HB 7135 to develop a cost effectiveness test criteria by rule to be applied to justification for increased residential building energy efficiency requirements.

**39. Study Energy Conservation Measures for Replacement of Air Conditioning Equipment**

**Origination:** Recommendation of the Energy TAC resulting from consideration of Energy Code amendment proposals regarding replacement air-conditioning systems at the October 2008 meeting. Approved by the Commission October 15, 2008.

**Schedule:**

Work Group/TAC considers options and develops consensus plan	3/27/09
	4/30/09
	5/28/09
Recommendations to Commission	12/09
Proposals for 2010 FBC submitted for adoption (See 2010 FBC development schedule)	3/10

Status: In progress

% Complete

**48. Develop Strategic Plan for Energy Standards Revision Pursuant to s.553.9061, F.S.**

**Subtask 46**

**Schedule:**

Workgroup appointed	12/9/08
Workgroup meetings	4/30/09
	5/28/09
	8/11/09
	9/09
Recommendations to Commission	10/09

Status: In Progress

% Complete

50%

**Origination:** The 2008 Legislature directed the Commission to enact specific increases in building energy efficiency requirements in HB 697 (Building Code) and HB 7135 (Energy). This sub- task initiates the study and development of a schedule.

**47. Develop Recommendations for 20% Increased Energy Efficiency Requirement for 2010 FBC (HB 697 and HB 7135)**

This task integrates the outputs of Task 35 and the Sub-tasks to develop a draft of Energy Code chapters for the 2010 FBC.

Schedule:

Workgroup appointed	12/9/08
Commission approves output of Task 27 and adopts requisite Rule	6/9/09
Workgroup recommends strategic plan for Commission approval	10/12/09
Contractor and Workgroup develop draft 2010 Energy chapters	9/09 -12/09
Proposals for 2010 FBC submitted for adoption	1/09

Status: Pending

% Complete

0%

**Origination:** In addition to the directives indicated in Task 35 and sub-tasks, the 2008 Legislature amended the building code law to require the IECC be adopted as a foundation code to be amended not less stringent than the Florida Energy Efficiency Code for Building Construction. The building code law requires updating the Code every three years with the 2010 FBC the next edition.

**42. Identify Specific Building Options to Achieve the Energy Efficiency Improvements (list identified in HB 697 and HB 7135)**

Schedule:

To be conducted as part of 2010 FEC recommendations development Task 47

**Origination:** Energy act of 2008 (HB 7135) directs the Commission to include, as a minimum, certain technologies for achieving enhanced building efficiency targets established by the Act in the Florida Energy Code. The Building Code act of 2008 (HB 697) directs the Commission to facilitate and promote the use of certain renewable energy technologies.

**26. Investigate Humidity Control Problems for Hot and Humid Climates**

**Schedule:** *In Progress*

To be conducted throughout the project

**Origination:** *The original workgroup recommended not pursuing special ratings for AC equipment used in hot and humid climates and recommended addressing the concerns with matching equipment moisture removal capabilities to building latent and sensible heat loads through the Florida Energy Code. Potential moisture control problems will be a part of the consideration for how to achieve improved building energy efficiencies directed by law.*

**Status:** for Sub-Tasks 42 & 26: *Pending*

**% Complete**

**29. Develop Criteria for Energy Efficient Pool and Spa Systems**

**Subtask 29**

**Schedule:**

Pool Sub-workgroup appointed	4/8/09
Workgroup meetings	6/8/09
	8/12/09
	10/14/09
Recommendations to Commission	12/09
Proposals for 2010 FBC submitted for adoption (See 2010 FBC development schedule)	3/10

**Status:** *Pending*

**% Complete**

**Origination:** *Energy act of 2008 (HB 7135) directs adoption of pool pump efficiencies in the 2010 FBC. During discussions with the Florida Spa and Pool Association regarding energy efficiency requirements for pool pumps members suggested improved efficiency could be achieved through criteria for pool hydronic system design.*

**45. Evaluate Requirements for Green Roofs Recognition in Florida Building Code**

**Subtask 45**

**Schedule:**

Cool Roofs Workgroup appointed	4/8/09
Workgroup meetings	10/09
Recommendations to Commission	12/09
Proposals for 2010 FBC submitted for adoption	12/09

(See 2010 FBC development schedule)

Status: Pending

**% Complete**

10%

**Origination:** Energy act of 2008 (HB 7135) directs the Commission to include, as a minimum, certain technologies for achieving enhanced building efficiency targets established by the Act in the Florida Energy Code. Energy efficient roofs are one category. The Building Code act of 2008 (HB 697) directs the Commission to facilitate and promote the use of certain renewable energy technologies. The Roofing TAC requested a special committee to address green roofs at the December 2008 Commission meeting.

**OTHER ENERGY AND GREEN TECHNOLOGY TASKS**

**Energy**

**47. Evaluate Equivalence of 2009 Florida Energy Code Commercial Building Requirements to ASHRAE 90.1-2004 and Certify to the U.S. Department of Energy**

**Schedule:**

Evaluation conducted by staff/contractor	3/09-8/09
TAC considers evaluation report	10/09
Recommendations to Commission	10/09
Commission reports to Governor's Office and DOE	10/09

Status: Pending

**% Complete**

0%

**Origination:** This task is required by federal law. Title III of the Energy Conservation and Production Act, as amended, (42 U.S.C. 6833(b)(2)(B)(i)) requires that each state must certify equivalence of its energy code to the edition of ASHRAE 90.1 that the U.S. Department of Energy determines sets the energy efficiency standard for commercial buildings.

# FLORIDA ENERGY CODE WORKGROUP PROCEDURAL GUIDELINES

## **PARTICIPANTS' ROLE**

- ✓ The Workgroup process is an opportunity to explore possibilities. Offering or exploring an idea does not necessarily imply support for it.
- ✓ Listen to understand. Seek a shared understanding even if you don't agree.
- ✓ Be focused and concise—balance participation & minimize repetition. Share the airtime.
- ✓ Look to the facilitator(s) to be recognized. Please raise your hand to speak.
- ✓ Speak one person at a time. Please don't interrupt each other.
- ✓ Focus on issues, not personalities. Avoid stereotyping or personal attacks.
- ✓ To the extent possible, offer options to address other's concerns, as well as your own.
- ✓ Participate fully in discussions, and complete meeting assignments as requested.
- ✓ Serve as an accessible liaison, and represent and communicate with member's constituent group(s).

## **FACILITATORS' ROLE (FCRC Consensus Center @ FSU)**

- ✓ Design and facilitate a participatory workgroup process.
- ✓ Assist the Workgroup to build consensus on a package of recommendations for delivery to the Florida Building Commission.
- ✓ Provide process design and procedural recommendations to staff and the Workgroup.
- ✓ Assist participants to stay focused and on task.
- ✓ Assure that participants follow ground rules.
- ✓ Prepare and post agenda packets, worksheets and meeting summary reports.

## **GUIDELINES FOR BRAINSTORMING**

- ✓ Speak when recognized by the Facilitator(s).
- ✓ Offer one idea per person without explanation.
- ✓ No comments, criticism, or discussion of other's ideas.
- ✓ Listen respectfully to other's ideas and opinions.
- ✓ Seek understanding and not agreement at this point in the discussion.

## **THE NAME STACKING PROCESS**

- ✓ Determines the speaking order.
- ✓ Participant raises hand to speak. Facilitator(s) will call on participants in turn.
- ✓ Facilitator(s) may interrupt the stack (change the speaking order) in order to promote discussion on a specific issue or, to balance participation and allow those who have not spoken on an issue an opportunity to do so before others on the list who have already spoken on the issue.

## **ACCEPTABILITY RANKING SCALE**

During the meetings, members will be asked to develop and rank options, and following discussions and refinements, may be asked to do additional rankings of the options if requested by members and staff. Please be prepared to offer specific refinements or changes to address your reservations. The following scale will be utilized for the ranking exercises:

<b>Acceptability Ranking Scale</b>	<b>4 =</b> <i>acceptable, I agree</i>	<b>3 =</b> <i>acceptable, I agree with minor reservations</i>	<b>2 =</b> <i>not acceptable, I don't agree unless major reservations addressed</i>	<b>1 =</b> <i>not acceptable</i>
------------------------------------	--	---	---	----------------------------------

## WORKGROUP'S CONSENSUS PROCESS

The Workgroup will seek to develop a package of consensus-based recommendations for submittal to the Florida Building Commission. General consensus is a participatory process whereby, on matters of substance, the members strive for agreements which all of the members can accept, support, live with or agree not to oppose. *In instances where, after vigorously exploring possible ways to enhance the members' support for the final decision on a recommendation, and the Workgroup finds that 100% acceptance or support is not achievable, final decisions will require at least 75% favorable vote of all members present and voting.* This super majority decision rule underscores the importance of actively developing consensus throughout the process on substantive issues with the participation of all members and which all can live with. In instances where the Workgroup finds that even 75% acceptance or support is not achievable, publication of recommendations will include documentation of the differences and the options that were considered for which there is more than 50% support from the Workgroup.

The Workgroup will develop its recommendations using consensus-building techniques with the assistance of the facilitator. Techniques such as brainstorming, ranking and prioritizing approaches will be utilized. Where differences exist that prevent the Workgroup from reaching a final consensus decision (i.e. with support of at least 75% of the members) on a recommendation, the Workgroup will outline the differences in its documentation.

The Workgroup's consensus process will be conducted as an open process consistent with applicable law. Workgroup members, staff, and facilitator will be the only participants seated at the table. Only Workgroup members may participate in discussions and vote on proposals and recommendations. The facilitator, or a Workgroup member through the facilitator, may request specific clarification from a member of the public in order to assist the Workgroup in understanding an issue. Observers/members of the public are welcome to speak during the public comment period provided at each meeting, and all comments submitted on the public comment forms provided in the agenda packets will be included in the facilitator's summary reports.

Facilitator will work with staff and Workgroup members to design agendas and worksheets that will be both efficient and effective. The staff will help the Workgroup with information and meeting logistics.

To enhance the possibility of constructive discussions as members educate themselves on the issues and engage in consensus-building, members agree to refrain from public statements that may prejudice the outcome of the Workgroup's consensus process. In discussing the Workgroup process with the media, members agree to be careful to present only their own views and not the views or statements of other participants. In addition, in order to provide balance to the Workgroup process, members agree to represent and consult with their stakeholder interest groups.

## WORKGROUP'S CONSENSUS RECOMMENDATIONS

### 1.A. ENERGY EFFICIENCY COST-EFFECTIVENESS TESTS FOR RESIDENTIAL CODE CONSENSUS RECOMMENDATIONS

The Florida Legislature directed the Commission to develop a rule for determining cost effectiveness of energy conservation measures to be considered for inclusion in the Florida Energy Code. The rule must be completed and applied to the update of the energy provisions of the for the 2010 Florida Building Code.

*“(3) The Florida Building Commission shall, prior to implementing the goals established in subsection (1), adopt by rule and implement a cost-effectiveness test for proposed increases in energy efficiency. The cost-effectiveness test shall measure cost-effectiveness and shall ensure that energy efficiency increases result in a positive net financial impact.”*

#### Energy Analysis Calculations Methodology

*Energy analysis necessary to determine energy savings for Energy Conservation Measures (ECMs) be accomplished using Florida’s code compliance software, EnergyGauge®.*

*Energy simulation analysis will be conducted for both single ECMs and packages of ECMs.*

#### Economic Analysis Assumptions

*Energy Conservation Measure (ECM) costs will be the full, installed incremental cost of improvements, where the incremental cost is equal to the difference between the baseline measure cost and the improved measure cost unencumbered by any federal tax credits, utility incentives or state rebates.*

*Energy Conservation Measure (ECM) costs will be the full, installed incremental cost of improvements, where the incremental cost is equal to the difference between the baseline measure cost and the improved measure cost unencumbered by any federal tax credits, utility incentives or state rebates, with option to consider encumbering utility incentives, etc. later, if possible.*

#### Study Life Period

*The analysis for residential buildings shall be conducted over a 30 year study period.*

#### ECM Service Life

*The evaluation shall be conducted using the appropriate service lives of the measures.*

#### Home Mortgage Parameter Values

*Mortgage interest rate: the greater of the most recent 5-year average and 10-year average simple interest rate for fixed-rate, 30-year mortgages computed from the Primary Mortgage Market Survey (PMMS) as reported by Freddie Mac.*

*Mortgage down payment: 10%.*

### **Annual Rate Parameter Values**

*General inflation rate: the greater of the most recent 5-year and 10-year Annual Compound Interest Rate (ACIR) computed from the annual average Consumer Price Index (CPI) as reported by the U.S. Bureau of Labor Statistics.*

*Discount rate: General inflation rate plus 2%.*

*Fuel escalation rate: the greater of 5-year and 10-year ACIR computed from revenue-based prices as reported by Florida Public Service Commission minus the general inflation rate.*

*The baseline electricity and natural gas prices used in the analysis shall be the statewide, revenue-based average residential price for the most recent available 12 months as provided by the Florida Public Service Commission.*

### **Cost Effectiveness Criteria**

*For present value cost-to-benefit ratio (PV/CB) a value of 1.0 or greater.*

*For the internal rate of return (IRR) on investments, a value equal to 8%. {The recommended value is approximately 1.5% greater than the guaranteed return on State of Florida DROPS (retirement account) investments and is considered large enough that any rational investor would consider the investment wise compared with any other long-term investment.}*

*For the levelized cost of conserved energy (LCCE), a value equal to the statewide residential revenue-based retail cost of electricity adjusted at the fuel escalation rate over one-half of the life of the measure (yields average over the measure life). {This is based on the fact that, over their life, accepted measures will cost consumers the same or less than purchasing electricity from the utility, where: LCCE criteria = (current price) \* [(1+fuelEsc) ^ (life/2)].}*

### **Evaluation Methodology for Measures and Packages of Measures**

*Create multiple packages of ECMs that result in the target % efficiency increase for each code cycle update (20, 30, 40 and 50%), based on comparison to the 2007 FBC as adopted October 31, 2007 (without the 2009 supplement).*

*Evaluate each ECM using adopted cost effectiveness indicators (PV/BC, IRR, LCCE), within their specific package of ECMs. PV/BC will be considered the primary measure with IRR and LCCE used as measures for illustration and communication of individual ECMs and packages of ECMs comparative economic viability.*

*Validation of the cost effectiveness of Florida Energy Efficiency Code for Building Construction changes shall mean that a number of ECM packages evaluated to comply with the statutory percent energy efficiency increase requirements have a greater benefit than cost as measured in present value dollars.*

## **1.B. ENERGY EFFICIENCY COST-EFFECTIVENESS TESTS FOR COMMERCIAL CODE CONSENSUS RECOMMENDATIONS**

### **Energy Analysis Calculations Methodology**

*Energy analysis necessary to determine energy savings for Energy Conservation Measures (ECMs) will be accomplished using Florida's code compliance software, EnergyGauge®.*

*Energy simulation analysis will be conducted for both single ECMs and packages of ECMs.*

### **Economic Analysis Assumptions**

*Energy Conservation Measure (ECM) costs will be the full, installed incremental cost of improvements, where the incremental cost is equal to the difference between the baseline measure cost and the improved measure cost unencumbered by any federal tax credits, utility incentives or state rebates.*

*Energy Conservation Measure (ECM) costs will be the full, installed incremental cost of improvements, where the incremental cost is equal to the difference between the baseline measure cost and the improved measure cost unencumbered by any federal tax credits, utility incentives or state rebates, with option to consider encumbering utility incentives, etc. later, if possible.*

### **Study Life Period**

*The analysis for commercial buildings shall be conducted over a 30 year study period with appropriate service lives included in the analysis.*

### **ECM Service Life**

*The evaluation shall be conducted using the appropriate service lives of the measures.*

### **Mortgage Parameter Values**

*Mortgage interest rate: the greater of the most recent 5-year average and 10-year average simple interest rate for fixed-rate, 30-year mortgages computed from the Primary Mortgage Market Survey (PMMS) as reported by Freddie Mac, rate plus 2%.*

*Mortgage down payment: 20%.*

### **Annual Rate Parameter Values**

*General inflation rate: the greater of the most recent 5-year and 10-year Annual Compound Interest Rate (ACIR) computed from the annual average Consumer Price Index (CPI) as reported by the U.S. Bureau of Labor Statistics.*

*Discount rate: General inflation rate plus 2%.*

*Fuel escalation rate: the greater of 5-year and 10-year ACIR computed from revenue-based prices as reported by Florida Public Service Commission minus the general inflation rate.*

*The baseline electricity and natural gas prices used in the analysis be the statewide, revenue-based average commercial price for the most recent available 12 months as provided by the Florida Public Service Commission.*

## Cost Effectiveness Criteria

*For present value cost-to-benefit ratio (PVCB) a value of 1.0 or greater.*

*For the internal rate of return (IRR) on investments, a value equal to 7%.*

*For the levelized cost of conserved energy (LCCE), a value equal to the statewide commercial revenue-based retail cost of electricity adjusted at the fuel escalation rate over one-half of the life of the measure (yields average over the measure life). {This is based on the fact that, over their life, accepted measures will cost consumers the same or less than purchasing electricity from the utility, where: LCCE criteria = (current price) \* [(1+fuelEsc) ^ (life/2)].}*

## Evaluation Methodology for Measures and Packages of Measures

*Create multiple packages of ECMs that result in the target % efficiency increase for each code cycle update (20, 30, 40 and 50%), based on comparison to the 2007 FBC as adopted October 31, 2007 (without the 2009 supplement).*

*Evaluate each ECM using adopted cost effectiveness indicators (PVBC, IRR, LCCE), within their specific package of ECMs. PVBC will be considered the primary measure with IRR and LCCE used as measures for illustration and communication of individual ECMs and packages of ECMs comparative economic viability.*

*Validation of the cost effectiveness of Florida Energy Efficiency Code for Building Construction changes shall mean that a number of ECM packages evaluated to comply with the statutory percent energy efficiency increase requirements have a greater benefit than cost as measured in present value dollars.*

### 1.C. DEFINITION OF “CONSUMER” (APPLIES TO BOTH RESIDENTIAL AND COMMERCIAL)

*Consumer: A class of economic system participant that makes no distinction between the owner of the building and the utility rate payer.*

*All of the above recommendations have been adopted by the Commission.*

### 3. ENERGY CONSERVATION MEASURES FOR REPLACEMENT OF AIR CONDITIONING EQUIPMENT RECOMMENDATIONS

#### Consensus Recommendations:

#### Sizing of Replacement Air Conditioning Systems:

*The A/C contractor or licensed Florida PE shall submit a nationally recognized method based sizing calculation at time of permit application for total replacement of the condensing / evaporator components of HVAC systems 65,000 Btu/h and less.*

*Exception: Buildings designed in accordance with Section 105.3.1.2 of the Florida Building Code, Building.*

## Testing of air distribution systems when air conditioning systems are replaced:

*At the time of the total replacement of HVAC evaporators & condensing units, under 65,000 Btu/h, all accessible (a minimum of 30 inches clearance) joints and seams in the air distribution system shall be sealed using reinforced mastic or code approved equivalent and shall include a signed certification by the contractor that is attached to the air handler unit stipulating that this work had been accomplished.*

*Exception:*

- 1. Ducts in conditioned space.*
- 2. Joints or seams that are already sealed with fabric and mastic.*
- 3. If system is tested and repaired as necessary.*

## 2. DEVELOP A STRATEGIC PLAN FOR INCREASED EFFICIENCY REQUIREMENTS REQUIRED BY LAW FOR FUTURE FBC EDITIONS

### Consensus Recommendations:

#### Strategic Plan Criteria:

1. The Strategic Plan must implement s.553.9061(1), F.S., scheduled increases in the Code's energy performance standard.
2. The Strategic plan must consider cost effectiveness of the incremental changes in efficiency required by the Code.
3. The Strategic Plan must implement s.553.73(6)(a), F.S., selection of the IECC as a foundation code and its modification to maintain the efficiencies of the Florida Energy Efficiency Code for Building Construction, s.553.901, F.S..
4. The Strategic Plan must implement s.553.9061(2), F.S., requiring the Code to recognize including energy efficiency performance options and elements including but not limited to:  
Solar water heating; Energy efficient appliances; Energy efficient windows, doors and skylights; Low solar absorption roofs/cool roofs; Enhanced ceiling and wall insulation; Reduced leak duct systems; Programmable thermostats; and Energy efficient lighting systems.
5. The Strategic Plan should identify compliance methods with the best potential for complying with the schedule for increasing efficiency standards.
6. The Strategic Plan should be adaptable for all potential mandated efficiency performance standard increase schedule.
7. The Strategic Plan should allow flexibility for builders to choose different ways to adapt their construction.
8. The Strategic Plan should provide flexibility appropriate to product innovation.
9. The Strategic Plan should provide for easy measurement and demonstration of compliance with the energy efficiency increases required by s.553.9061, F.S..
10. The Strategic Plan should require that compliance meets an equivalent energy standard regardless of the compliance method.

**PUBLIC COMMENT FORM**

The Florida Building Commission and the 2010 Florida Energy Code Workgroup encourage written comments—All written comments will be included in the meeting summary report.

Name: \_\_\_\_\_

Organization: \_\_\_\_\_

Meeting Date: \_\_\_\_\_

*Please make your comment(s) as specific as possible, and offer suggestions to address your concerns.*

*Please limit comment(s) to topics within the scope of the Workgroup, and refrain from any personal attacks or derogatory language.*

*The facilitator may, at his discretion, limit public comment to a maximum of three-minutes (3) per person, depending on the number of individuals wishing to speak.*
