

NAILFIN INSTALLATION

95 1/4 × 95	MAXIMUM FRAME
1/2 +	ME
+50/-50	DP
NO	IMPACT

Installation Notes:

TYPICAL ELEVATION WITH FASTENER SPACING

- silicone caulk when no fastener is used to anchor the sill (typical). Seal flange/frame to substrate. Sill shall be set on a continuous serpentine bead of structural grade
- 2 of 1 1/2" into the wood framing. For 2x wood frame substrate (min. S.G. = 0.42) Use #8 PH or greater fastener through the nailing flange with sufficient length to penetrate a minimum
- project of installation. to the structure. The host structure is the responsibility of the architect or engineer of record for the Host structure (wood buck, masonry, steel) to be designed and anchored to properly transfer all loads

ယ

General Notes:

- of the 2018 International Residential Code (IRC), the 2018 International Building Code (IBC). The product shown herein is designed, tested and manufactured to comply with the wind load criteria
- $\omega \sim$ All glazing shall conform to ASTM E1300.
- Use structural or composite shims where required

unit or go to www jeld-wen com complete installation procedure, see the instructions packaged with the consideration that may arise in different wall conditions. For the to the installation process and does not address the sealing to achieve the rated design pressure and impact performance (where applicable) up to the size limitations noted. It is not intended as a guide This schedule addresses only the fasteners required to anchor the unit
