RESIDENTIAL INSULATED STEEL DOOR (Common to all frame conditions)

COMPONENT CONSTRUCTIONS:

Face sheets: 24 ga. (0.020") minimum thickness, Galvanized Steel A-525 commercial quality - AKDQ per ASTM 620 with average minimum yield strength $F_y(\text{ave.})=24,600$ psi.

Core design: Door core by JELD-WEN.

Door Panel Construction: The active and inactive panels are constructed from 24GA. (0.020" min.) galvanized steel. The face sheet tops and bottoms are bent 90° over the top and bottom rails. The top LVL rail measures 1.67" wide x 1.042" high. The steel bottom rail is roll formed 0.021" galvanized steel measuring 1.67" wide x 1.21" high. The sides of the face sheet are roll formed onto the LVL latch stile and Ponderosa Pine hinge stile which measure 1.67" x 1.0". The interior cavity is filled with polystyrene. The face sheets are glued to the door core.

Fixed Lite Const.: The sash is constructed from 24GA. (0.020" min.) galvanized steel. The edges of the face sheet are bent 90° over the polystyrene core and glued to it. The sidelite panels are routed to receive the ODL Lip Lite Frames or the optional Trinity Light Frames. (See sheet 7 for glazing details.) The lite frames are sealed w/ QSD glazing compound on the exterior.

Frame Construction: The frames are constructed from Ponderosa Pine jambs measuring 1.25" wide x 4.5625" deep. The door and sidelite head jambs are mortised and butt joined to the side jambs and attached with (3) 16GA. 2" x 7/16" crown wire staples. The units use a standard bump face Pemko threshold measuring 4.041" deep x 1.0" high. The threshold is attached to the frame with (3) 16GA. 2" x 7/16" crown wire staples.
