

THROUGH FRAME INSTALLATION

| | 41 3/8 | MAXIMUM |
|----------|---------|---------|
| WINDZONE | × 76 | FRAME |
| E 3 | +50/-65 | DP |
| | YES | IMPACT |

Installation Notes:

TYPICAL ELEVATION WITH FASTENER SPACING

- silicone caulk when no fastener is used to anchor the sill (typical). Seal flange/frame to substrate. Sill shall be set on a continuous serpentine bead of structural grade
- 2 Use #8 PH or greater fastener through the head & side jambs with sufficient length to penetrate a minimum of 1 1/2" into the wood framing. For 2x wood frame substrate (min. S.G. = 0.42).
- ω 4 Use #8 PH or greater fastener through wind clips and jamb jacks through side jamb into buck
- project of installation. to the structure. The host structure is the responsibility of the architect or engineer of record for the Host structure (wood buck, masonry, steel) to be designed and anchored to properly transfer all loads

General Notes:

- of the adopted International Building Code (IBC), the International Residential Code (IRC), the Florida Building Code (FBC) and the industry requirement for the stated conditions. The product shown herein is designed, tested and manufactured to comply with the wind load criteria
- All glazing shall conform to ASTM E1300.

 ωN

- Interlayer by Kuraray 2.3mm annealed insulating glass At minimum, glazing is 3.0mm annealed - 8.3mm airspace - 2.3mm annealed - 2.3mm PVB
- Use structural or composite shims where required
