RE: Equivalence between SSTD 12-99 Impact Testing Standard and
ASTM E-1996 Impact Testing Standard for Qualification of Storm Panels.

To Whom it May Concern:

This is to certify that Impact Testing performed in accordance with SSTD 12-99 is structurally equivalent to Impact Testing performed as per ASTM E-1996 standard as long as the installation is limited to wind zones 1, 2 and 3, as defined by the ASTM standard.

Therefore, please take note of this wind zone limitation as far as locations applicable to storm panel installation.

Very truly yours,

Walter A. Tillit Jr., P.E.
