A Subsidiary of the International Code Council®

DIVISION: 06 00 00—WOOD, PLASTICS AND COMPOSITES

Section: 06 17 33—Wood I-joists

REPORT HOLDER:

BOISE CASCADE WOOD PRODUCTS, LLC

EVALUATION SUBJECT:

BCI PREFABRICATED WOOD I-JOISTS

1.0 EVALUATION SCOPE

Compliance with the following codes:

- 2018, 2015, 2012, 2009 and 2006 *International Building Code®* (IBC)
- 2018, 2015, 2012, 2009 and 2006 *International Residential Code®* (IRC)
- 2013 *Abu Dhabi International Building Code* (ADIBC)†

†The ADIBC is based on the 2009 IBC. 2009 IBC code sections referenced in this report are the same sections in the ADIBC.

For evaluation for compliance with codes adopted by the Los Angeles Department of Building and Safety (LADBS), see [ESR-1336 LABC and LARC Supplement](#).

Properties evaluated:

- Structural
- Sound ratings
- Fire-resistance ratings
- Floor and roof spans

2.0 USES

BCI prefabricated wood I-joists are prefabricated wood I-joists used as floor joists, roof rafters, blocking panels and rim boards to support code-required loads. Prefabricated wood I-joists described in this report comply with Section 2303.1.2 of the IBC and Section R502.1.2 of the IRC (Section R502.1.4 for the 2009 and 2006 IRC) for allowable stress design.

3.0 DESCRIPTION

3.1 General:

The BCI joists are prefabricated wood I-joists with laminated veneer lumber flanges and oriented strand board (OSB) webs. The I-joists have parallel top and bottom flanges, resulting in a constant-depth joist. The web-to-web joints are glued joints and conform to the specifications in the approved quality control manual. The BCI joists are available in various lengths and depths. See Table 1 for joist dimensions and material specifications.

3.2 Material Specifications:

3.2.1 Flanges: The flanges of the BCI I-joists are laminated veneer lumber that is currently recognized in the approved quality control manual. Flange width, depth and grade requirements are noted in Table 1.

3.2.2 Web: OSB web material is either $\frac{3}{8}$ -inch-thick (9.5 mm) or $\frac{7}{16}$ -inch-thick (11 mm) Exposure I with a span rating of 24/0.

3.2.3 Adhesive: Adhesives used in the fabrication of the I-joists are exterior-type, heat durable adhesives complying with ASTM D2559 and ASTM D5055 and are specified in the approved quality control manual and the Boise Cascade manufacturing standards.

4.0 DESIGN AND INSTALLATION

4.1 General:

Design and installation of the BCI prefabricated wood I-joists described in this report must comply with the conditions described in Sections 4.2 through 4.16 of this report.

4.2 Allowable Structural Capacity:

Table 2 specifies reference design moments, shears, deflection coefficients and I-joist stiffness (EI). Reference design reactions are given in Table 3 and are based on a minimum bearing length of $1\frac{1}{2}$ inches (38.1 mm) for end supports and $3\frac{1}{2}$ inches (89 mm) at intermediate supports for continuous spans. Other bearing conditions are also shown in the Table 3. Linear interpolation between tabulated values in Table 3 is permitted. When joists are used as simple span members, the design shear is equal to the end reaction. When joists are used as multiple span members, the maximum interior reaction is as noted in Table 3. Table 4 specifies allowable vertical load capacities for joists used as blocking panels or rim boards.

4.3 Fasteners:

The equivalent specific gravities and the spacing of fasteners installed in the laminated veneer lumber flanges must comply with this report.

See Table 5 for the equivalent specific gravities for use in determining the design values of fasteners installed into the flanges of BCI joists. Table 6 specifies the minimum allowable spacing for fasteners installed into the flanges of BCI joists. See Table 7 for limitations on the allowable lateral design values of BCI joists when used as framing members in horizontal wood diaphragms.

4.4 Web Stiffeners:

Web stiffener requirements for reactions and concentrated loads must be as noted in Figure 1.

4.5 Lateral Support:

The compression flange must be continuously laterally supported, and the joist ends restrained to prevent rotation. Code-recognized methods specified for solid-sawn lumber are acceptable. Bridging is not required for BCI floor and roof joist applications.

4.6 Holes in the I-Joist Web:

The allowable location of holes in the web material of BCI joists must be determined in one of the following ways:

1. An analytical approach can be used, provided the calculations are reviewed and approved by a registered design professional.
2. Boise Cascade Wood Products, LLC, design software can be used to determine the allowable location of web holes in BCI joists.
3. Size and location of allowable web holes in BCI joists for specific conditions comply with the details noted in Tables 8, 9, 10, 11, 12 and 13 of this report.
4. The allowable location of holes can be determined by calculating the allowable shear capacity (based on the reduction in shear capacity) of BCI joists at web holes, V_{hole} , using the equations shown below. All dimensions and shear values are in units of inches and pounds, respectively:

BCI Joists with OSB web, circular hole:

$$V_{hole} = V_r \left[B_C - M_C \left(\frac{\text{hole diameter}}{\text{joist depth} - 2 \times \text{flange depth}} \right) \right]$$

BCI Joists with OSB web, square, rectangular or obround hole:

$$V_{hole} = V_r \left[B_R - M_D \left(\frac{\text{hole depth}}{\text{joist depth} - 2 \times \text{flange depth}} \right) - M_L \left(\frac{\text{hole length}}{18} \right) \right]$$

where:

V_r = Shear value, for the joist, provided in Table 2;

B_C = 0.88 (except for BCI 90e joists with depth > 16";
= 0.91 for BCI 90e joists with depths > 16");

M_C = 0.69 (except for BCI 90e joists with depth > 16";
= 0.84 for BCI 90e joists with depths > 16");

M_D = 0.28 for all BCI joists;

M_L = 0.29 (except at obround hole) for all BCI '1000 (XXOO)' series joists; 0.25 for all obround holes and BCI '100(XXO)' and '10(XX)' series joists;

B_R = 0.60 (except for BCI 90e joists with depth > 16");
= 0.57 for BCI 90e joists with depths > 16".

Note: Square or rectangular holes may be cut 4" longer when using 2" radius cuts at the corners. The original hole length, in the original location, shall be used to calculate V_{hole} ($B_R=0.60$, $M_D=0.28$, $M_L=0.25$).

5. Knockout holes installed during the manufacturing process may be utilized wherever present.

4.7 Duration of Load:

Adjustments for duration of load must be in accordance with Sections 7.3.2 and 10.3.2 of the ANSI/AWC *National Design Specification® for Wood Construction* (NDS).

4.8 In-service Moisture Conditions:

I-joists must be installed in dry, covered conditions where the in-service moisture content of the wood does not exceed 16 percent.

4.9 Repetitive-member Use:

The repetitive-member use factors applicable to the reference design moments listed in Table 2 of this report must be limited to 1.0.

4.10 Member Spans:

I-joist spans must be determined in accordance with Section 3.2.1 of the NDS. Vertical shear calculations include all loads within the span from face to face of supports. Allowable floor spans for specific conditions are shown in Table 14.

4.11 Deflection:

Total I-joist deflection is caused by two types of stresses: bending and shear. Bending deflection must be calculated using standard engineering formulae. Shear deflection must be calculated using the following formula:

$$\Delta = \frac{8M}{K}$$

Example: Total deflection of a uniformly loaded, simple-span joist is determined using the following formula:

$$\Delta = \frac{5wL^4}{384EI} + \frac{wL^2}{K}$$

Example: Total deflection of a simple-span joist with a concentrated load at mid-span is determined using the following formula:

$$\Delta = \frac{PL^3}{48EI} + \frac{2PL}{K}$$

EI = I-joist stiffness from Table 2.

K = Shear stiffness coefficient from Table 2.

L = I-joist span (inches).

M = Design moment (inch-pounds).

P = Applied concentration load (pounds).

w = Applied uniform load (pounds per linear inch).

Δ = Total I-joist mid-span deflection (inches).

4.12 Blocking Panels and Rim Boards:

I-joists under bearing walls that are perpendicular to the joists require full-depth blocking. Joists used as blocking panels or rim board members have the maximum vertical and horizontal load transfer capacities shown in Tables 4 and 7, respectively.

4.13 Cantilevered Joists:

I-joists are permitted to be installed with cantilevers, provided the cantilevers have a maximum length equal to one third of the adjacent span and support uniform loads only. Alternately, design calculations showing compliance with the design properties in Table 2 of this report can be submitted to the building official for approval.

4.14 Fire-resistance-rated Roof-ceiling and Floor-ceiling Assemblies:

BCI joists are permitted as components of roof/ceiling or floor/ceiling assemblies required to have a fire-resistance rating of one hour in accordance with the code when constructed in accordance with Figure 2, 3, 4, 5 or 6 of this report. BCI joists are permitted as components of roof/ceiling or floor/ceiling assemblies required to have a fire-resistance rating of two hours in accordance with the code when constructed in accordance with Figure 7.

In addition to the fire-resistive-rated assemblies shown in Figures 2 through 7 of this report, the BCI joists described in this report may be used in the assemblies described in 2018, 2015 and 2012 IBC Table 721.1(3), Item Numbers 21-1.1, 23-1.1, 24-1.1, 25-1.1, 26-1.1, 27-1.1 and 28-1.1; 2009 IBC Table 720.1(3), Item Numbers 21-1.1, 23-1.1, 24-1.1, 25-1.1, 26-1.1, 27-1.1 and 28-1.1; or in the assemblies described in the 2006 IBC Table 720.1(3), Item Numbers 21-1.1, 23-1.1, 25-1.1, 26-1.1, 27-1.1, 28-1.1 and 29-1.1, provided the I-joists used meet the required criteria as described in the "Floor or Roof Construction" column.

4.15 Sound-rated Floor-ceiling Assemblies:

BCI joists are permitted as components of floor/ceiling assemblies required to have acoustical ratings in accordance with the code when constructed in accordance with Figure 2, 3, 4, or 6 of this report. Sound transmission class (STC) and impact insulation class (IIC) ratings are as given in Figures 2, 3, 4 and 6, for the listed floor topping components.

4.16 Fire Protection of Floors:

BCI series I-joists installed and protected as specified in Figures 8, 9, 10, 11, 12 and 13 are alternatives to the 2-by-10 dimension lumber prescribed in 2018 and 2015 IRC Section R302.13 and 2012 IRC Section R501.3, Exceptions 1 and 2, and Exception 4, and have met the requirements for a floor assembly demonstrating equivalent fire performance. BCI series I-joists installed and protected as specified in Figure 14 meet the provisions of 2018 and 2015 IRC Section R302.13 and 2012 IRC Section R501.3.

5.0 CONDITIONS OF USE

The BCI Prefabricated Wood I-joists described in this report comply with, or are suitable alternatives to joists and rafters specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

- 5.1 BCI joists must be installed in accordance with this report and the manufacturer's installation details.
- 5.2 Drawings and design details verifying compliance with this report must be submitted to the code official when requested. The drawings and calculations must be prepared by a registered design professional where required by the statutes of the jurisdiction in which the project is to be constructed.

- 5.3 Where one-hour or two-hour fire-resistance-rated construction is required, the construction must comply with this report.
- 5.4 Cutting or notching of BCI joist flanges is beyond the scope of this report.
- 5.5 Sound-rated assemblies noted in Section 4.15 of this report, with STC and or IIC ratings of less than 50, are only applicable in jurisdictions using the IRC.
- 5.6 BCI and BCI FMJ™ Joists are manufactured by Boise Cascade Wood Products, LLC, at their White City, Oregon; Lena, Louisiana; and St. Jacques, New Brunswick, facilities, under an approved quality-control program with inspections by ICC-ES and APA—The Engineered Wood Association (AA 649).

6.0 EVIDENCE SUBMITTED

- 6.1 Manufacturer's installation instructions.
- 6.2 Data in accordance with the ICC-ES Acceptance Criteria for Prefabricated Wood I-joists (AC14), dated June 2019, and the ICC-ES Acceptance Criteria for Rim Board Products (AC124) dated June 2019 (editorially revised February 2020).
- 6.3 Reports of fire tests conducted in accordance with ASTM E119.
- 6.4 Reports of sound transmission tests conducted in accordance with ASTM E90, E413 and E492.

7.0 IDENTIFICATION

- 7.1 Each joist panel is stamped with the Boise Cascade Wood Products, LLC, logo; plant location and product designation; evaluation report number (ESR-1336); and the logo of the inspection agency (APA—The Engineered Wood Association).

- 7.2 The report holder's contact information is the following:

For SI: 1 inch = 25.4 mm; 1 ft-lb = 1.36 N²lb ft = 179 m²N; 1 in-lb/in = 4.4 N-mm/mm; 1 lb = 4.45 N; 1 lb/ft = 14.6 N/m.

⁽¹⁾ For joist descriptions see Table 1.

⁽²⁾ Calculate bending and shear deflection as described in Section 4.11 "Deflection".

⁽³⁾ Repetitive member use factors are limited to 1.0.

⁽⁴⁾ For reference design reaction values, see Table 3.

For SI: 1 inch = 25.4 mm; 1 ft-lb = 1.36 N-m; 1 in²-lb = 179 mm²-N; 1 in-lb/in = 4.4 N-mm/mm; 1 lb = 4.45 N; 1 lb/ft = 14.6 Nm.

⁽¹⁾ For joist descriptions see Table 1.

⁽²⁾ Calculate bending and shear deflection as described in Section 4.11 "Deflection".

⁽³⁾ Repetitive member use factors are limited to 1.0.

⁽⁴⁾ For reference design reaction values, see Table 3.

For SI: 1 inch = 25.4 mm; 1 lb/ft = 14.6 N/m

⁽¹⁾ Blocking panels and rim boards shall be continuously supported

⁽²⁾ Web stiffener required at each end and at 24" on center max, see FIGURE 1.

⁽³⁾ 3 - 8d nails required in web stiffeners for blocking panels.

⁽⁴⁾ Values in parentheses apply to BCI90e only

⁽⁵⁾ Maximum horizontal load transfer capacity for all BCI joists is 690 plf (see Table 7).

TABLE 5—EQUIVALENT SPECIFIC GRAVITIES FOR CONNECTORS⁽¹⁾

FLANGE GRADING	LATERAL		LATERAL INSTALLED INTO NARROW FACE		WITHDRAWAL	
	INSTALLED INTO WIDE FACE		Loaded parallel to length	Loaded perp. to length	Loaded parallel to length	Loaded perp. to length
	1.3-2.2	0.50	0.50	0.50	0.46	0.50

¹A specific gravity of 0.46 is equivalent to Douglas Fir-South

A specific gravity of 0.50 is equivalent to Douglas Fir-Larch

			3	360	480	690	320	240		

For SI: 1 inch = 25.4 mm; 1 plf = 14.59 N/m.

¹For wind load applications, the values in the table above shall be permitted to be multiplied by 1.4.

²Minimum flange grade = 1.7E MOE.

³The tabulated allowable shear capacities are for I-joist series with flanges having a specific gravity (G) of 0.50 or higher (see Table 5). For G<0.50 the allowable shear capacities shall be reduced by multiplying the allowable shear shear capacities by the Specific Gravity Adjustment Factor = [1-(0.5-G)]. The Specific Gravity Adjustment Factor shall not be greater than 1.

⁴Nominal widths of framing members are as follows: 1-1/2 in, 1-3/4 in, and 2 in = 2 in (4000(s)-5000(s)); 2-5/16 in, 2-9/16 in, and 3-1/2 in = 3 in (6000(s)-9000(s)), BCI '10' series).

⁵The minimum nominal width of framing members not located at boundaries or adjoining panel edges shall be 2 inches.

⁶Space nails maximum 12 inches o.c. along intermediate framing members (6 inches o.c. when supports are spaced 48 inches o.c. or greater). Fasteners shall be located 3/8 inch minimum from panel edges.

⁷When nail spacing is closer than 6 inches on center at diaphragm boundaries or any panel edge, adjacent nails within a row must be offset (staggered) 1/2 inch.

⁸Nail spacing closer than 4 inches on center requires BCI '10' series framing (2 5/16" min. flange width, 1 1/2" min. flange depth.)

⁹8d common nails minimum are recommended for roof panel attachments.

¹⁰See Table 4.2A of SDPWS for diaphragm Configurations.

NOTES

- 1. CUT HOLES CAREFULLY! DO NOT OVERCUT CORNERS OF RECTANGULAR HOLES! DO NOT CUT JOIST FLANGES!**
 - The hole locations listed above are valid for joists supporting only uniform loads, (.40 psf Live Load and a 15 psf Dead Load, spaced up to 16" on center).
 - Hole location is measured from the center of bearing to the center of a circular or rectangular hole from the closest support.
 - Circular and rectangular holes may be placed anywhere within the depth of the joist web.
 - For a hole size that differs from those covered, use the next larger hole dimension.

Table 9 - Boise BCI Web Hole Charts: 40 psf Live Load, 20 psf Dead Load, up to 16" octagon

NOTES

- NOTE:**

 - CUT HOLES CAREFULLY! DO NOT OVERCUT CORNERS OF RECTANGULAR HOLES! DO NOT CUT JOIST FLANGES!**
 - The hole locations listed above are valid for joists supporting only uniform loads, (40 psf Live Load and a 20 psf Dead Load, spaced up to 16" on center).
 - Hole location is measured from the center of bearing to the center of a circular or rectangular hole from the closest support.
 - Circular and rectangular holes may be placed anywhere within the depth of the joist web.
 - For a hole size that differs from those covered, use the next larger hole dimension.

NOTES:

- CUT HOLES CAREFULLY! DO NOT OVERCUT CORNERS OF RECTANGULAR HOLES! DO NOT CUT JOIST FLANGES!
- The hole locations listed above are valid for joists supporting only uniform loads, (40 psf Live Load and a 15 psf Dead Load, spaced up to 24" on center).
- Hole location is measured from the center of bearing to the center of a circular or rectangular hole from the closest support.
- Circular and rectangular holes may be placed anywhere within the depth of the joist web.
- For a hole size that differs from those covered, use the next larger hole dimension.

Table 12 - Boise BCI Web Hole Charts: 40 psf Live Load, 20 psf Dead Load, up to 24" oc

NOTES:

- CUT HOLES CAREFULLY! DO NOT OVERCUT CORNERS OF RECTANGULAR HOLES! DO NOT CUT JOIST FLANGES!
- The hole locations listed above are valid for joists supporting only uniform loads, (40 psf Live Load and a 20 psf Dead Load, spaced up to 24" on center).
- Hole location is measured from the center of bearing to the center of a circular or rectangular hole from the closest support.
- Circular and rectangular holes may be placed anywhere within the depth of the joist web.
- For a hole size that differs from those covered, use the next larger hole dimension.

NOTES:

1. CUT HOLES CAREFULLY! DO NOT OVERCUT CORNERS OF RECTANGULAR HOLES! DO NOT CUT JOIST FLANGES!

2. The hole locations listed above are valid for joists supporting only uniform loads, (40 psf Live Load and a 25 psf Dead Load, spaced up to 24" on center).

3. Hole location is measured from the center of bearing to the center of a circular or rectangular hole from the closest support.

4. Circular and rectangular holes may be placed anywhere within the depth of the joist web.

5. For a hole size that differs from those covered, use the next larger hole dimension.

For SI: 1 ft = 0.3048 m; 1 inch = 25.4 mm; 1 psf = 47.88 N/m².

¹Values represent simple spans.

²Spans are measured from middle of bearing length to middle of bearing length (1¹/₂-inch minimum bearing).

³Span table is based on 2³/₃₂", 24-inch oc-rated Sturd-I-Floor, glued and nailed to BCI Joists. The adhesive must comply with Specification AFG-01 of the APA—The Engineered Wood Association. The type and spacing of the fasteners must comply with the code.

⁴Span table based on 1¹/₂-inch end reaction values with no web stiffeners.

For SI: 1 ft = 0.3048 m; 1 inch = 25.4 mm; 1 psf = 47.88 N/m².

¹Values represent simple spans.

²Spans are measured from middle of bearing length to middle of bearing length (1½-inch minimum bearing).

³Span table is based on 23/32", 24-inch oc rated Sturd-I-Floor, glued and nailed to BCI Joists. The adhesive must comply with Specification AFG-01 of the APA—The Engineered Wood Association. The type and spacing of the fasteners must comply with the code.

⁴Span table based on 1½-inch end reaction values with no web stiffeners.

For SI: 1 ft = 0.3048 m; 1 inch = 25.4 mm; 1 psf = 47.88 N/m².

¹Values represent simple spans.

²Spans are measured from middle of bearing length to middle of bearing length (1¹/₂-inch minimum bearing).

³Span table is based on 2³/₃₂", 2-inch oc rated Sturd-I-Floor, glued and nailed to BCI Joists. The adhesive must comply with Specification AFG-01 of the APA—The Engineered Wood Association. The type and spacing of the fasteners must comply with the code.

⁴Span table based on 1¹/₂-inch end reaction values with no web stiffeners.

	22"		8-16d	8-16d
	24"		8-16d	8-16d

¹Nails shall be equally spaced vertically.

²Stiffeners are required on all joists supported by U-type hangers when the sides of the hanger do not extend up far enough to support the top flanges laterally.

FIGURE 1—WEB STIFFENER DETAIL

BASE ASSEMBLY				
Component	Material Specification			
Floor Topping (Optional)	Varies			
Reference sound ratings if applicable				
Floor Sheathing	Min. $\frac{23}{32}$-inch (18 mm) T&G Wood Structural Panel			
A modified contact construction adhesive must be applied to the top surface of the I-joist top flanges prior to placing sheathing. The sheets shall be installed with their long edge perpendicular to the joists with end joists centered over the top flange of joists and staggered one joist spacing with adjacent sheets. Floor sheathing must be installed per code requirements.				
Insulation (Optional)	Max 9$\frac{1}{2}$-inch (241 mm) Glass Fiber Insulation			
Reference sound ratings if applicable				
Structural Members	Min. 9$\frac{1}{2}$-inch (241 mm) Deep Joists			
Maximum 24 inch (610 mm) on center spacing. Minimum flange dimensions of 1 $\frac{1}{8}$ -inch (29 mm) thick by 1 $\frac{1}{2}$ -inch (38 mm) wide.				
Resilient Channels (Optional)	Min. 0.019-inch (0.5 mm) Galvanized Resilient Channels			
Attached perpendicular to the bottom flange of the joist with 1 $\frac{1}{4}$ -inch (32 mm) Type S drywall screws. Channels are spaced a maximum of 16 inches (406 mm), 24 inches (610 mm) on center when I-joists are spaced a maximum of 16 inches on center.				
Ceiling	(2) Layers of $\frac{5}{8}$-inch (16 mm) Type X Gypsum Wallboard			
<u>Base Layer:</u> Install with long dimension perpendicular to joist length. Attach to the bottom flange of the joists using 1 $\frac{1}{4}$ -inch (32 mm) Type W drywall screws at 24 inches (610 mm) on center. The end joints of the wallboard must be centered on the bottom flange of the joist and must be staggered the equivalent of two joist spacings with those of adjacent sheets. <u>Face Layer:</u> Install with long dimension perpendicular to joist length. Attach to the bottom flange of the joists through the first layer using 1 $\frac{7}{8}$ -inch (48 mm) Type W drywall screws spaced at 12 inches (305 mm) on center. The longitudinal joints of this layer must be offset 24 inches (610 mm) from those of the base layer. The end joints must be centered on the bottom flange of the joists and offset a minimum of one joist spacing from those of the base layer. Additionally, face layer end joints are attached to the base layer with 1 $\frac{1}{2}$ -inch (38 mm) Type G drywall screws at 12 inches (305 mm) on center placed 2 inches (51 mm) either side of the joint. <u>With Resilient Channels:</u> attached as described above except use 1 $\frac{1}{8}$ -inch (29 mm) and 1 $\frac{5}{8}$ -inch (41 mm) Type S screws for the base and face layer, respectively. The end joints of the wallboard must be centered on a resilient channel and must be staggered the equivalent of two joist spacings with those of adjacent sheets. <u>Finish:</u> The face layer joints must be covered with tape and coated with joint compound. Screw heads must also be covered with joint compound.

BASE ASSEMBLY				
Component	Material Specification			
Floor Topping (Optional)	Varies			
Reference sound ratings if applicable				
Floor Sheathing	Min. 23/32-inch (18 mm) T&G Wood Structural Panel			
A modified contact construction adhesive must be applied to the top surface of the I-joist top flanges prior to placing sheathing. The sheets shall be installed with their long edge perpendicular to the joists with end joists centered over the top flange of joists and staggered one joist spacing with adjacent sheets. Floor sheathing must be installed per code requirements.				
Insulation	Min. 2-inch (51 mm) Mineral Fiber Insulation, Min. 3.5 pcf			
Installed adjacent to the bottom flange of the I-Joist and supported by the 1x4 furring strips. The ends of the batts must be centered over resilient channels.				
Structural Members	Min. 9 1/2-inch (241 mm) Deep Joists			
Maximum 24 inch (610 mm) on center spacing. Minimum flange dimensions of 15/16-inch (33 mm) thick by 1 3/4-inch (44 mm) wide.				
Furring Strips	1x4 (Nominal) Wood Furring Strips			
Centered on the bottom flange of the I-Joist and attached with 1 1/2-inch (38 mm) Type W screws at 24 inches (610 mm) on center				
Resilient Channels	Min. 0.019-inch (0.5 mm) Galvanized Resilient Channels			
Attached perpendicular to the bottom flange of the I-Joist with 17/8-inch (48 mm) Type S drywall screws. Channels are spaced a maximum of 16 inches (406 mm) on center and doubled at each wallboard end joint extending to the next joist beyond each joint.				
Ceiling	(1) Layer of 5/8-inch (16 mm) Gold Bond Brand Fire-Shield C Gypsum Wallboard			
Installed with long dimension perpendicular to resilient channels and fastened with minimum 1 1/8-inch (29 mm) Type S drywall screws at 7 inches (178 mm) on center. The end joints of the wallboard must be staggered the equivalent of two joist spacings with those of adjacent sheets.				
Finish: The face layer joints must be covered with tape and coated with joint compound. Screw heads must also be covered with joint compound.

**FIGURE 6—ONE-HOUR FIRE-RESISTANCE-RATED FLOOR AND ROOF ASSEMBLY
(One Layer $\frac{5}{8}$ " 'Type C' Gypsum Wallboard and 2" Gypsum Strips)**

BASE ASSEMBLY	
Component	Material Specification
Floor Topping (Optional)	Varies
Reference sound ratings if applicable	
Floor Sheathing	Min. $\frac{23}{32}$-inch (18 mm) T&G Wood Structural Panel
A modified contact construction adhesive must be applied to the top surface of the I-joist top flanges prior to placing sheathing. The sheets shall be installed with their long edge perpendicular to the joists with end joists centered over the top flange of joists and staggered one joist spacing with adjacent sheets. Floor sheathing must be installed per code requirements.	
Insulation	Max $3\frac{1}{2}$-inch (89 mm) Unfaced Glass Fiber Insulation
Friction fitted between I-Joists and supported by stay wires spaced 12 inches (305 mm) on center along the top of the joist bottom flange.	
Structural Members	Min. $9\frac{1}{2}$-inch (241 mm) Deep Joists
Maximum 24 inch (610 mm) on center spacing. Minimum flange dimensions of $1\frac{1}{8}$ -inch (29 mm) thick by 2-inch (51 mm) wide.	
Furring Channels	Min. 0.019 inch (0.5 mm) Hat Shaped Galv. Steel Channels
Attached perpendicular to the bottom flange of the I-Joist with two (2) $1\frac{5}{8}$ -inch (41 mm) Type S drywall screws penetrating through the wallboard base layer into each joist flange. Channels are spaced a maximum of 16 inches (406 mm) on center and doubled at each wallboard end joint extending to the next joist beyond each joint.	
Ceiling	(3) Layers of $\frac{5}{8}$-inch (16 mm) Sheetrock Brand Firecode C Gypsum Wallboard
<u>Base Layer</u> : Install with long dimension perpendicular to joist length. Attach to the bottom flange of the joists using $1\frac{5}{8}$ -inch (41 mm) Type S drywall screws at 12 inches (305 mm) on center. The end joints of the wallboard must be centered on the bottom flange of the joist and must be staggered the equivalent of two joist spacings with those of adjacent sheets.	
<u>Middle Layer</u> : attached to furring channels using 1-inch (25 mm) Type S drywall screws at 12 inches (305 mm) on center with the long dimension perpendicular to furring channels. End joints must be staggered from end joints of adjacent sheets and end joints on the face layer.	
<u>Face Layer</u> : attached to furring channels through the middle layer using $1\frac{5}{8}$ -inch (41 mm) Type S drywall screws spaced at 8 inches (203 mm) on center with long dimension perpendicular to furring channel. End joints must be staggered from end joints of adjacent sheets and staggered 32 inches (813 mm) end joints on the middle layer. Edge joints (long dimension) must be offset 24 inches (610 mm) from those of the middle layer.	
<u>Finish</u> : The face layer joints must be covered with tape and coated with joint compound. Screw heads must also be covered with joint compound.	

**FIGURE 7—TWO-HOUR FIRE-RESISTANCE-RATED FLOOR AND ROOF ASSEMBLY
(Three Layers $\frac{5}{8}$ " 'Type C' Gypsum Wallboard)**

1/2-inch-thick Gypsum Board Attached to Web

(A) Floor Sheathing: Materials and installation must be per 2018, 2015 or 2012 IRC Section R503

(B) I-Joist: Installation per Section 4.1 of this evaluation report. Minimum flange size of 1.5 inches x 2.0 inches. Minimum web thickness of $\frac{3}{8}$ inch.

(C) 1/2-inch-thick Gypsum Board: Materials (entire length of I-joist) per 2018, 2015 or 2012 IRC Section R702.3.1 (not required to be finished with tape and joint compound). **Fasteners:** Min. 1inch-long screws (Type W or Type S) or nails installed 1 inch from edges and 16 inches on center, top and bottom. Fasteners may be staggered from top to bottom.

Installation Requirements at Web Holes

Note: At hole location, fasteners must be installed 1 inch from the edge of the gypsum board and horizontally spaced a distance equivalent to the hole width/diameter plus 2 inches.

Crawl Space Exception

Per Exception 2 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a crawl space not intended for storage or fuel-fired appliances do not require additional fire protection.

**Automatic Sprinkler System Exception**

Per Exception 1 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a space protected by an automatic sprinkler system do not require additional fire protection.

(D) Automatic Sprinkler System: System in accordance with Section P2904 of the 2018, 2015 IRC or 2012 IRC, NFPA 13D, or other equivalent sprinkler system. **Note:** Per 2018, 2015 or 2012 IRC Section P2904, partial residential sprinkler systems are permitted to be installed only in buildings not required to be equipped with a residential sprinkler system. Check with the local building official for specific jurisdictional requirements.

For SI: 1 inch = 25.4 mm

FIGURE 8—FIRE PROTECTION: 2018 AND 2015IRC SECTION R302.13 OR 2012IRC SECTION R501.3, EXCEPTIONS 1 AND 2, AND EXCEPTION 4; 1/2-INCH-THICK GYPSUM BOARD ATTACHED DIRECTLY TO WEB

1/2-inch-thick Gypsum Board Attached to Sides of Flange

(A) **Floor Sheathing:** Materials and installation must be per 2018, 2015 or 2012 IRC Section R503.

(B) **I-Joist:** Installation per Section 4.1 of this evaluation report. Minimum flange size of 1.125 inches x 1.75 inches. Minimum web thickness of $\frac{3}{8}$ inch.

(C) **1/2-inch-thick Gypsum Board:** Materials (entire length of I-joist) per 2018, 2015 or 2012 IRC Section R702.3.1 (not required to be finished with tape and joint compound). **Fasteners:** Min. 1-inch-long screws (Type W or Type S) or nails installed $\frac{1}{2}$ inch from edges and 16 inches on center, top and bottom. Fasteners may be staggered from top to bottom.

Installation Requirements at Web Holes

Note: At hole location, fasteners must be installed 1 inch from the edge of the gypsum board and horizontally spaced a distance equivalent to the hole width/diameter plus 2 inches. Maximum fastener spacing shall be no more than 8" on gypsum board above and below the hole.

Crawl Space Exception

Per Exception 2 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a crawl space not intended for storage or fuel-fired appliances do not require additional fire protection.

**Automatic Sprinkler System Exception**

Per Exception 1 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a space protected by an automatic sprinkler system do not require additional fire protection.

(D) **Automatic Sprinkler System:** System in accordance with Section P2904 of the 2018, 2015 or 2012 IRC, NFPA 13D, or other equivalent sprinkler system. **Note:** Per 2018 or 2015 IRC or 2012 IRC Section P2904, partial residential sprinkler systems are permitted to be installed only in buildings not required to be equipped with a residential sprinkler system. Check with the local building official for specific jurisdictional requirements.

For SI: 1 inch = 25.4 mm

FIGURE 9—FIRE PROTECTION: 2018 AND 2015IRC SECTION R302.13 OR 2012IRC SECTION R501.3, EXCEPTIONS 1 AND 2, AND EXCEPTION 4; 1/2-INCH-THICK GYPSUM BOARD ATTACHED DIRECTLY TO SIDES OF FLANGE

Mineral Wool Insulation

(A) Floor Sheathing: Materials and installation must be per 2018, 2015 or 2012 IRC Section R503.

(B) I-Joist: Installation per Section 4.0 of this evaluation report. Minimum flange size of 1.125 inches x 2.0 inches. Minimum web thickness of $\frac{3}{8}$ inch. Maximum 24 inches on center I-joint spacing.

(C) Mineral Wool Batt Insulation: 3-inch-thick, minimum 2.5 lb per ft³ mineral wool batt insulation made of rock or furnace slag (ASTM C665 Type 1 compliant) installed as shown with insulation stay wire supports spaced no more than 24 inches apart and no more than 6 inches from ends of batts. The insulation width must be a minimum of 15-1/4 inches when installed between joists that are 16 inches on center or 23 inches when installed between joists that are 24 inches on center. The insulation batts must be properly located on top of the I-joist bottom flange and installed without gaps between individual batts.

Crawl Space Exception

Per Exception 2 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a crawl space not intended for storage or fuel-fired appliances do not require additional fire protection. Note: insulation may be required for energy code compliance purposes; check with the local building official for specific jurisdictional requirements.

Automatic Sprinkler System Exception

Per Exception 1 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a space protected by an automatic sprinkler system do not require additional fire protection. Note: insulation may be required for energy code compliance purposes; check with the local building official for specific jurisdictional requirements.

(D) Automatic Sprinkler System: System in accordance with Section P2904 of the 2018, 2015 or 2012 IRC, NFPA 13D, or other equivalent sprinkler system. **Note:** Per 2018, 2015 or 2012 IRC Section P2904, partial residential sprinkler systems are permitted to be installed only in buildings not required to be equipped with a residential sprinkler system. Check with the local building official for specific jurisdictional requirements.

For SI: 1 inch = 25.4 mm, 1 lb/ft³ = 16 kg/m³

FIGURE 10—FIRE PROTECTION: 2018 AND 2015IRC SECTION R302.13 OR 2012IRC SECTION R501.3, EXCEPTIONS 1 AND 2, AND EXCEPTION 4; MINERAL WOOL BATT INSULATION

Ceramic Fiber Blanket Attached on Web

(A) Floor Sheathing: Materials and installation must be per 2018, 2015 IRC or 2012 IRC Section R503.

(B) I-Joist: Installation per Section 4.0 of this ESR report. Minimum flange size of 1.5-inch-thick by 2.31-inch-wide. Minimum web thickness of $\frac{3}{8}$ inch.

(C) Ceramic Fiber Blanket: $\frac{3}{8}$ -inch-thick, minimum 4 lb per ft^3 , Mei Guo International, LLC (USA) FireBreak[®] proprietary ceramic fiber blanket made of aluminum oxide and silicon dioxide (ASTM C892 Type III compliant) is attached directly on web as shown with two rows of $\frac{7}{8}$ -inch-long crown staples installed staggered at 8 inches on center horizontal spacing. The maximum vertical staple-to-staple distance between two row of staples must be 3 inches with additional rows of staples added as necessary for i-joist depth greater than $9\frac{1}{2}$ inches. The ceramic blanket must fill the web space with no gaps, and contact both inside flange faces to protect the web. Joist spacing up to 24 inches on center is allowed. Holes should be 1 inch larger than service dimension, and an "X" cut in the ceramic fiber blanket on both sides to allow wire/pipe/duct to pass through.

Crawl Space Exception

Per Exception 2 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a crawl space not intended for storage or fuel-fired appliances do not require additional fire protection. Note: insulation may be required for energy code compliance purposes; check with the local building official for specific jurisdictional requirements.

Automatic Sprinkler System Exception

Per Exception 1 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a space protected by an automatic sprinkler system do not require additional fire protection. Note: insulation may be required for energy code compliance purposes; check with the local building official for specific jurisdictional requirements.

(D) Automatic Sprinkler System: System in accordance with Section P2904 of the 2018, 2015 or 2012 IRC, NFPA 13D, or other equivalent sprinkler system. **Note:** Per 2018, 2015 or 2012 IRC Section P2904, partial residential sprinkler systems are permitted to be installed only when the entire dwelling unit is not required to be equipped with a residential sprinkler system. Check with the local building official for specific jurisdictional requirements.

For SI: 1 inch = 25.4 mm, 1 lb/ ft^3 = 16 kg/ m^3

FIGURE 11—FIRE PROTECTION: 2018 AND 2015IRC SECTION R302.13 OR 2012IRC SECTION R501.3, EXCEPTIONS 1 AND 2, AND EXCEPTION 4; CERAMIC FIBER BLANKET ATTACHED DIRECTLY ON WEB

Drop-in Gypsum Board

(A) Floor Sheathing: Materials and installation must be per 2018, 2015 or 2012 IRC Section R503.

(B) I-Joist: Installation per Section 4.0 of this evaluation report. Minimum flange size of 1.125 inches x 2.0 inches. Minimum web thickness of $\frac{3}{8}$ inch. The maximum I-joist center-to-center spacing is either 19.2 inches or 24 inches.

(C) Gypsum Board Drop-In Panel: For 19.2-inch maximum I-joist spacing, one layer of minimum $\frac{1}{2}$ -inch-thick gypsum wallboard must be used. For 24-inch maximum I-joist spacing, one layer of minimum $\frac{5}{8}$ -inch-thick gypsum wall board must be used. Gypsum wallboard shall comply to ASTM C1396 for gypsum wallboards. The drop-in panel is installed on the top surface of the bottom flange. Mechanical fastener or adhesive attachment to the top surface of the bottom flange is not required. A maximum gap of $\frac{5}{16}$ inch between the edge of the gypsum and the I-joist web shall be permitted. Penetrations or openings for ducts, vents, electrical outlets, lighting, devices, luminaires, wires, speakers, drainage, piping and similar openings or penetrations on I-joist web shall be permitted.

Crawl Space Exception

Per Exception 2 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a crawl space not intended for storage or fuel-fired appliances do not require additional fire protection. Note: insulation may be required for energy code compliance purposes; check with the local building official for specific jurisdictional requirements.

Automatic Sprinkler System Exception

Per Exception 1 of 2018 or 2015 R302.13 or 2012 IRC Section R501.3.13, floor assemblies located directly over a space protected by an automatic sprinkler system do not require additional fire protection. Note: insulation may be required for energy code compliance purposes; check with the local building official for specific jurisdictional requirements.

(D) Automatic Sprinkler System: System in accordance with Section P2904 of the 2018 or 2015 or 2012 IRC, NFPA 13D, or other equivalent sprinkler system. **Note:** Per 2018 or 2015 or 2012 IRC Section P2904, partial residential sprinkler systems are permitted to be installed only in buildings not required to be equipped with a residential sprinkler system. Check with the local building official for specific jurisdictional requirements.

For **SI:** 1 inch = 25.4 mm

FIGURE 12—FIRE PROTECTION: 2018 AND 2015IRC SECTION R302.13 OR 2012IRC SECTION R501.3, EXCEPTIONS 1 AND 2, AND EXCEPTION 4; DROP-IN GYPSUM

Fire Membrane Joist (FMJ™) Factory-Applied Thermax™ Sheathing Board

(A) Floor sheathing: Materials and installation must be per Section R503 of the 2018, 2015 or 2012 IRC.

(B) I-joist: Installation per Section 4.0 of this evaluation report. Maximum 24 inches on center spacing. Minimum flange size of 1.50 inches thick x 2.50 inches wide. Minimum web thickness of $\frac{3}{8}$ inch.

(C) Factory-applied proprietary Thermax™ Sheathing Board: One layer of $\frac{3}{4}$ -inch thick Thermax™ Sheathing board conforming to ICC-ES [ESR-1659](#) is adhered to each side of the I-joist web in accordance with the in-plant manufacturing standard.

Crawl Space Exception

Per Exception 2 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a crawl space not intended for storage or fuel-fired appliances do not require additional fire protection. Note: insulation may be required for energy code compliance purposes; check with the local building official for specific jurisdictional requirements.

Automatic Sprinkler System Exception

Per Exception 1 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a space protected by an automatic sprinkler system do not require additional fire protection. Note: insulation may be required for energy code compliance purposes; check with the local building official for specific jurisdictional requirements.

(D) Automatic sprinkler system: System in accordance with Section P2904 of the 2018, 2015 and 2012 IRC, NFPA 13D, or other equivalent sprinkler systems. Note: Per 2018, 2015 or 2012 IRC Section P2904, partial residential sprinkler systems are permitted to be installed only in buildings not required to be equipped with a residential sprinkler system. Check with the local building official for specific jurisdictional requirements.

For SI: 1 inch = 25.4 mm, 1 lb/ft³ = 16 kg/m³

FIGURE 13—FIRE PROTECTION: 2018 AND 2015IRC SECTION R302.13 OR 2012IRC SECTION R501.3, EXCEPTIONS 1 AND 2, AND EXCEPTION 4; THERMAX™ SHEATHING BOARD

Gypsum Board or Wood Structural Panels Attached to Bottom of Flange

(A) Floor Sheathing: Materials and installation must be per 2018, 2015 or 2012 IRC Section R503.

(B) I-Joist: Installation per Section 4.1 of this evaluation report. Applicable to all flange sizes. Minimum web thickness of $\frac{3}{8}$ inch.

(C) 1/2-inch-thick Gypsum Board: Materials and installation per Section R702.3.1 of the 2018, 2015 or 2012 IRC or equivalent. Gypsum Board not required to be finished with tape and joint compound; or 5/8-inch-thick Wood Structural Panel: Materials and installation per Section R503.2 of the 2015 IRC or 2012 IRC, or equivalent. Wood Structural Panel not required to be finished with wood filler or sanded.

Note: Per Exception 3 of 2018, 2015 Section R302.13 or 2012 IRC Section R501.3, portions of floor assembly can be unprotected when complying with the following:

- 1) The aggregate area of the unprotected portions shall not exceed 80 square feet per story.
- 2) Fire blocking in accordance with Section R302.11.1 of the 2018, 2015 or 2012 IRC must be installed along the perimeter of the unprotected portion to separate the unprotected portion from the remainder of the floor assembly.

Crawl Space Exception

Per Exception 2 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a crawl space not intended for storage or fuel-fired appliances do not require additional fire protection.

Automatic Sprinkler System Exception

Per Exception 1 of 2018 or 2015 IRC Section R302.13 or 2012 IRC Section R501.3, floor assemblies located directly over a space protected by an automatic sprinkler system do not require additional fire protection of floors using gypsum board or wood structural panels attached to the bottom of the flange.

(D) Automatic Sprinkler System: System in accordance with Section P2904 of the 2018, 2015 or 2012 IRC, NFPA 13D, or other equivalent sprinkler system. Note: Per 2018, 2015 or 2012 IRC Section P2904, partial residential sprinkler systems are permitted to be installed only in buildings not required to be equipped with a residential sprinkler system. Check with the local building official for specific jurisdictional requirements.

For SI: 1 inch = 25.4 mm

DIVISION: 06 00 00—WOOD, PLASTICS AND COMPOSITES**Section: 06 17 33—Wood I-joists****REPORT HOLDER:****BOISE CASCADE WOOD PRODUCTS, LLC****EVALUATION SUBJECT:****BCI PREFABRICATED WOOD I-JOISTS****1.0 REPORT PURPOSE AND SCOPE****Purpose:**

The purpose of this evaluation report supplement is to indicate that BCI prefabricated wood I-joists, described in ICC-ES evaluation report [ESR-1336](#) have also been evaluated for compliance with the codes noted below as adopted by the Los Angeles Department of Building and Safety (LADBS).

Applicable code editions:

- 2020 City of Los Angeles Building Code (LABC)
- 2020 City of Los Angeles Residential Code (LARC)

2.0 CONCLUSIONS

The BCI prefabricated wood I-joists, described in Sections 2.0 through 7.0 of the evaluation report [ESR-1336](#), comply with the LABC Chapter 23 and the LARC, and are subject to the conditions of use described in this supplement.

3.0 CONDITIONS OF USE

The BCI prefabricated wood I-joists, described in this evaluation report supplement must comply with all of the following conditions:

- All applicable sections in the evaluation report [ESR-1336](#).
- The design, installation, conditions of use and identification are in accordance with the 2018 *International Building Code*® (IBC) and 2018 *International Residential Code*® (IRC) provisions noted in the evaluation report [ESR-1336](#), as applicable.
- The design, installation and inspection are in accordance with additional requirements of LABC Chapters 16 and 17, as applicable.
- Flanges must not be subjected to dynamic or static outward forces which may tend to separate the flanges from the web. Bottom flanges must not support load exceeding 250 pounds on each side of flange at 5 feet on center or 100 pounds per linear foot.

This supplement expires concurrently with the evaluation report, reissued September 2021.

DIVISION: 06 00 00—WOOD, PLASTICS, AND COMPOSITES

Section: 06 17 33—Wood I-Joists

REPORT HOLDER:

BOISE CASCADE WOOD PRODUCTS, LLC

EVALUATION SUBJECT:

BCI PREFABRICATED WOOD I-JOISTS

1.0 REPORT PURPOSE AND SCOPE

Purpose:

The purpose of this evaluation report supplement is to indicate that the BCI prefabricated wood I-joists described in ICC-ES evaluation report ESR-1336, have also been evaluated for compliance with the codes noted below.

Applicable code editions:

- 2020 and 2017 Florida Building Code—Building
- 2020 and 2017 Florida Building Code—Residential

2.0 CONCLUSIONS

The BCI prefabricated wood I-joists, described in Sections 2.0 through 7.0 of ICC-ES evaluation report ESR-1336, comply with the *Florida Building Code—Building* and the *Florida Building Code—Residential*, provided the design requirements are in accordance with the *Florida Building Code—Building* or the *Florida Building Code—Residential*, as applicable. The installation requirements noted in ICC-ES evaluation report ESR-1336 for the 2018 and 2015 *International Building Code*® (IBC) meet the requirements of the *Florida Building Code—Building* or the *Florida Building Code—Residential*, as applicable.

Use of the BCI prefabricated wood I-joists for compliance with the High-Velocity Hurricane Zone provisions of the *Florida Building Code—Building* and the *Florida Building Code—Residential* has not been evaluated and is outside the scope of this evaluation report.

For products falling under Florida Rule 61G20-3, verification that the report holder's quality-assurance program is audited by a quality-assurance entity approved by the Florida Building Commission for the type of inspections being conducted is the responsibility of an approved validation entity (or the code official, when the report holder does not possess an approval by the Commission).

This supplement expires concurrently with the evaluation report, reissued September 2021.
