## **Scope**

Molimo, LLC was contracted by MI Windows and Doors, LLC to evaluate alternate installation methods for their Series 1630 Horizontal Sliding Window. The evaluation is based on physical testing and product certifications. Reference standards utilized in this project include:

*Florida Building Code, Building, 8<sup>th</sup> Edition (2023).* International Code Council, 2023.

*ANSI/AWC NDS-2018 National Design Specification (NDS) for Wood Construction.* American Wood Council, 2018.

*AISI S100-16 North American Specification for the Design of Cold-Formed Steel Structural Members, 2016.* American Iron and Steel Institute, 2016.

*ADM1-2020, 2020 Aluminum Design Manual.* The Aluminum Association, Inc. 2020.

*ICC-ES Report ESR-1976 ITW Buildex TEKS Self-Drilling Fasteners.* ICC Evaluation Service. 07/2016.

*NOA 21-0201.06 Tapcon Concrete and Masonry Anchors with Advanced Threadform Technology.* Miami-Dade County Product Control Section. 02/01/2022.

The anchorage analyses presented herein do not address the water resistance, water penetration or air infiltration performance of the installation method or the installed product. In addition, the analyses rely on the assumption that the building substrate is capable of withstanding incurred loads.

### Certification of Independence

In accordance with Rule 61G20-3 Florida Administrative Code, Molimo, LLC hereby certifies the following:

- Molimo, LLC does not have, nor does it intend to acquire or will it acquire, a financial interest in any company manufacturing or distributing products tested or labeled by the agency.
- Molimo, LLC is not owned, operated or controlled by any company manufacturing or distributing products it tests or labels.
- Micheal D. Stremmel, P.E. does not have nor will acquire, a financial interest in any company manufacturing or distributing products for which the reports are being issued.
- Micheal D. Stremmel, P.E. does not have, nor will acquire, a financial interest in any other entity involved in the approval process of the product.

## Analyses

### Summary of Test Results

The following table summarizes the various 1630 Horizontal Sliding Window products and their corresponding performance levels which have been established by testing or product certification.

**Table 1** Summary of Test Results

<b>Series/Model</b>	<b>Test Report Number</b>	<b>Product Certification</b>	<b>Size (W x H)</b>	<b>Performance</b>
1630 HS (XOX, Wide Sash) (Fin Install)	H2947.01-801-44 (Rev. -, 05/31/17)	CPD 16745	120" x 63"	+/- 25 psf
1630 HS (XOX, Wide Sash) (Frame Install)	H2947.01-801-44 (Rev. -, 05/31/17)	CPD 16745	120" x 63"	+/- 25 psf
1630 HS (XOX, Equal Sash) (Frame Install)	2959.08-106-12 (Rev. -, 07/18/22)		110" x 63"	7.52 psf Water Test Pressure

Testing documented in Table 1 was conducted by Molimo, LLC of York, Pennsylvania (Florida Department of Business & Professional Regulation Test Lab No. TST11282, IAS Certificate of Accreditation TL-678) and Architectural Testing, Inc. (an Intertek Company) in Plano, Texas (Florida Department of Business & Professional Regulation Test Lab No. TST1910, IAS Certificate of Accreditation TL-331).

### As-Tested Installation Analysis

For air/water/structural testing, the test specimen was secured to a pine buck with #8 x 1-5/8" wood screws through the integral PVC nail fin. A test specimen with #8 x 2" screws installed through the window frame was also tested. The as-tested installation methods are evaluated on page 7 to page 13 and the established design capacities are summarized in Table 2.

**Table 2** As-tested Anchorage Design Capacities

Test	Connection	Capacity
1630 HS Air/Water/Structural Test Nail Fin Install	#6 x 1-5/8" screws. Placed 2" from each corner and 16" on center.	53 lb
1630 HS Structural Test Through-Frame Install	<u>Head and Jambs</u> #10 x 1-5/8" screws. Placed 4" from each corner and 16" on center.	114 lb
	<u>Sill, at each meeting stile</u> 0.075" thick aluminum frame clip. Secured to buck with two #8 x 1-1/4" screws. Secured to frame with two #8 x 1/2" screws.	238 lb
1630 HS Water Test Through-Frame Install	<u>Head</u> #8 x 2" screws. Placed 4" from each corner and 14" on center.	114 lb
	<u>Sill</u> #8 x 2" screws. Placed 2" each side of each meeting stile.	114 lb
	<u>Jambs</u> #8 x 2" screws. Placed 4" from each corner and midspan.	114 lb

The capacities presented in Table 2 will be used to prove acceptable alternate anchors and substrates for the windows.

### Alternate Anchorages

Calculations on page 14 determine the design capacity of alternate nail fin installation anchorages for the window. The alternate anchorage capacities are summarized in Table 3.

**Table 3** Alternate Anchorage Capacities for Nail Fin Installations

Substrate	Anchor	Capacity	Comments
18 Gauge Steel Stud	#10-16 TEKS Screw	104 lb	1. 33 KSI yield strength stud. 2. Full penetration +3 threads. 3. Limited by pull-out capacity.

Calculations on page 15 through page 20 determine the design capacity of alternate through-frame installation anchorages for the window. The alternate anchorage capacities are summarized in Table 4.

**Table 4** Alternate Anchorage Capacities for Through-Frame Installation

Substrate	Anchor	Capacity	Comments
18 Gauge Steel Stud	#10-16 TEKS Screw	152 lb	1. 33 KSI yield strength stud. 2. Full penetration +3 threads. 3. Limited by bending of anchor 4. Use two anchors at frame clip. Frame clip capacity is 304 lb.
Concrete	3/16" Tapcon	186 lb	1. Minimum $f'_c = 3,000$ psi 2. 1-1/2" Minimum Embedment 3. 2" Min. Edge Distance 4. Limited by shear capacity 5. Maximum 1x buck strip 6. Use two anchors at frame clip. Frame clip capacity is 372 lb.
CMU	3/16" Tapcon	135 lb	1. Minimum ASTM C90 CMU 2. 1-1/2" Minimum Embedment 3. 2" Min. Edge Distance 4. Limited by shear capacity. 5. Maximum 1x buck strip 6. Use two anchors at frame clip. Frame clip capacity is 270 lb.

Note: Maximum available length of 3/16" Tapcon anchor is 3-1/4". Use 1/4" x 4" Tapcon anchors for through-frame installations with 1x buck strip.

### **Anchorage Requirements**

It must be determined the anchorages are not overloaded for the approved window size and design pressures. Calculations presented on page 21 show the as-tested spacing is adequate for the minimum anchor capacity reported in this report when the windows are subjected to the maximum design pressures of the products at their approved maximum sizes. Thus, all alternate anchorages proposed by this report may be used for the windows at the as-tested spacing.
